1. Introducción

La máquina de la cual veremos su funcionamiento a continuación es una maquina exprimidora de jugo, este es un aparato eléctrico el cual es usado para la extracción por medio de la fricción y presión del zumo de distintas frutas especialmente cítricas, como, por ejemplo: naranjas, limones, etc.

En este trabajo se investigó un poco más sobre la maquina de jugo ya que esta que hicimos se le ingresaban monedas entonces para conocer más su procedimiento y poder programarlo.

El programa que lo que se hizo fue en dos JFrame para que nos muestre de forma gráfica cómo funciona la máquina en la parte de botones donde se selecciona el tipo de jugo a comprar, se ingresa el dinero para poder realizar la compra, se muestran los tipos que son y, al realizar la compra este arrojará el cambio de la compra para que el cliente lo recoja al igual que su jugo tendrá que recoger, estos pasos se realizan en el lenguaje de programación de Java en la IDE de NetBeans.

2. Justificación

En esta parte del proyecto el programa se hizo de forma gráfica para que las demás personas entiendan el como funciona el autómata dentro de esta máquina, esto con el fin de que todos sepan para que se necesitan los autómatas en cada cosa que usamos en su vida diaria.

La realización de está maquina es principalmente para facilitar la elaboración de los jugos, ya que hacerlos manualmente consta mas de varios minutos de su elaboración para poder obtener uno.

3. Objetivos

3.1. Objetivo General

Elaborar un programa que nos muestre como funciona una máquina de jugos para saber el algoritmo que maneja.

3.2. Objetivo Especifico

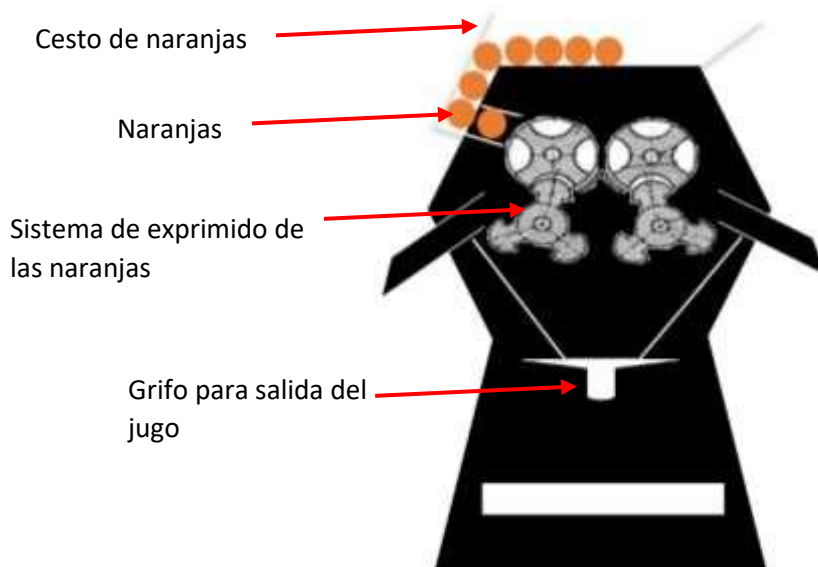

Conocer cómo funciona el la maquina por medio de programa y el recorrido del autómata especificado.

4. Desarrollo

Este proyecto está enfocado a las máquinas de jugo de naranja (automáticas), aquí elaboraremos el programa con el cual mostraremos como funciona este aparato por medio de una simulación y ver cómo actúa con las diferentes combinaciones que le entraran a la máquina.

Este programa grafico nos muestra como se lleva cada proceso en el autómeta para llegar en un estado final, ósea, la finalidad de su tarea

4.1. Maquina de jugos de naranja

4.2. Código

The image shows a digital interface for a vending machine, specifically for a juice machine. At the top, the title "MAQUINA DE JUGOS" is displayed in a bold, black, sans-serif font. Below the title, the text "Dinero:" is followed by the value "50.0". Underneath, the text "Su cambio es de:" is followed by "Eliga el tamaño de jugo". There are three options for the size of the juice, each with a radio button and a price: "600 ml \$15", "1 litro \$25", and "2 litros \$45". The "2 litros \$45" option is selected. Below these options are three buttons: "Comprar", "Cambio", and "Cancelar". To the right of the text, there are images of Mexican currency: a 5-peso coin, a 20-peso banknote, a 50-peso banknote, and a 100-peso banknote. The background of the interface is light blue.

5. Conclusión

Para poder realizar el proyecto de la máquina de jugos se tuvo que investigar como es el proceso de este, y cómo funcionan las máquinas expendedoras para poder entregar y revolver un producto y su cambio de la compra. La máquina de jugos se tiene que ingresar el dinero a través de botones que estos tendrán la función de ingresar la cantidad que se muestra en cada botón; es decir hay botones de 5, 10, 20, 50 y 100 pesos que estos hacen referencia al dinero que se ingresara en la máquina, así también se escogerá el tipo de jugo a comprar y al realizar la compra la maquina arrojará el cambio de la compra.

Mi proyecto lo hice con varias pruebas para comprobar que el programa que funcione de manera correcta y no tenga errores.
